IMPACT

STUDY FOR IMPROVING MATERNAL, PREGNANCY AND CHILD OUTCOMES

# DO YOU WANT TO HELP US PREDICT **PREECLAMPSIA?**

Participating hospitals

www.impactstudien.se

**We are looking for pregnant women who are interested in participating in a Swedish study aimed at investigating the potential for early pregnancy prediction of preeclampsia later in their pregnancy. This is done with the aid of a blood sample, blood pressure data, and health status information.**

## HOW WILL MY TREATMENT BE AFFECTED?

The study will not result in any changes in your treatment, although hopefully in a few years we will have developed ways of identifying women who run a high risk of early pregnancy complications, such as preeclampsia, and we can then provide them with better treatment and more effective monitoring of their pregnancy.

## WHAT IS THE PROCEDURE?

All you need to do is provide a blood sample and answer a few simple questions when you attend for your routine ultrasound examination during weeks 11-14. This will be the only time you will need to be involved in the study, and no follow-up visits are necessary. It takes 10-15 minutes, and participation is completely voluntary. If you would like to participate, you will receive detailed information about the study, and you will be asked to sign a consent form.

The blood sample will be stored at a biobank where in the future we can investigate other promising markers for predicting pregnancy complications. You can let us know at any time if you no longer wish your blood sample to be stored.
